Besondere Hinweise: Ertragspoolung zur Risikostreuung

Beim vorliegenden „Pool Hewingsen“ handelt es sich um zwei eigenständige Betreibergesellschaften. Zum Ausgleich möglicher Ertragsunterschiede zwischen ihren benachbarten Standorten sowie zur Streuung der Betriebsrisiken haben sie sich entschlossen, ihre Stromerträge zu „poolen“. Das bedeutet, dass die Einzelträge der Anlagen zusammengerechnet und anschließend der Durchschnittsertrag den beteiligten Gesellschaften wieder zugewiesen wird. Hierdurch werden Ertragsschwankungen ausgeglichen. Der Poolertrag entspricht zugleich dem Wert, der bei Projekten mit Bürgerbeteiligung im Prospekt dargestellt wurde. Er ist auf der letzten Seite dieses PDFs separat dargestellt!
Die Zahl der Anlagen ist bei diesem Poolprojekt ungleich verteilt: die Gesellschaft Windpark Wulfshof betreibt zwei Enercon E-58, die Gesellschaft Windstrom Echtrop betreibt eine Enercon E-58.

Poolertrag

Der Poolertrag ist der Durchschnittswert der beteiligten Windkraftanlagen. Die Gesellschaft „Windpark Wulfshof“ betreibt allerdings zwei der drei Anlagen des Pools, deshalb ist unten der zweifache Durchschnittsertrag dargestellt, entspricht also dem Ertrag von E-58. (Auf die Darstellung des einfachen Durchschnittsertrages für die Gesellschaft Windstrom Echtrop wird verzichtet, da es sich hierbei nicht um ein Projekt mit Bürgerbeteiligung handelt.)
